## HOW DOES IT DO IT ?

Kuhlekt works by uploading data from your ERP system, once the data is ingested into the cloud, Kuhlekt has a very powerful search and drill down functionality, which makes working with the data easy. Accounts are assigned to collectors and each collector has their own view of what they should be actioning. It is all based around workflows to follow up, "Notes", "Promise to Pays" etc.. and our "Suggested Call" list derived from the nine key metrics. Managers have their own dashboard view over the collection team with powerful drill down to a single ledger for ledger reviews or ongoing management.

Powerful dashboards and reporting provide management overviews of the actions and requirements of the collection staff to ensure all commitments and accounts are addressed within agreed response times.
